According to our (Global Info Research) latest study, the global Capacitance Diaphragm Gauges market size was valued at USD 111 million in 2023 and is forecast to a readjusted size of USD 209.2 million by 2030 with a CAGR of 9.5% during review period.

A capacitance diaphragm gauge, commonly referred to as a CDG, measures vacuum gas pressure by direct measurement of the applied force on the surface of a thin diaphragm. A traditional capacitance vacuum transducer measures absolute pressure where one side of the diaphragm is exposed to a permanently sealed vacuum cavity integrated in the sensor element and the other side of the diaphragm is exposed to the process media.

The mechanical deflection of the elastic sensor diaphragm is a function of the applied pressure. The diaphragm constitutes an electrode and together with an integrated auxiliary electrode it forms a pressure dependent capacitor that in an electrical measurement circuit converts the applied pressure to an electrical signal.

Global core capacitance diaphragm gauges manufacturers include Inficon, MKS etc. The top 3 companies hold a share about 65%. Asia Pacific is the largest market, with a share about 62%, followed by Americas and Europe with the share about 22% and 13%.
