According to our (Global Info Research) latest study, the global Capacitive Touch Detection Controller market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

A capacitive touch detection controller is an electronic device that can detect and control a capacitive touch screen. A capacitive touch screen is a display that uses changes in the capacitance of the human body to achieve touch functions. The capacitive touch detection controller sends voltage signals to the four corners of the touch screen, and then calculates the position of the touch point according to the received signal strength. The capacitive touch detection controller can also recognize different gestures according to the number and shape of touch points, thereby realizing functions such as multi-touch and handwriting input. Capacitive touch detection controllers are widely used in mobile devices such as smartphones, tablets, and laptops.
