## Abstracts

A capacitor bank is merely a grouping of several capacitors of the same rating. Capacitor banks may be connected in series or parallel, depending upon the desired rating. As with an individual capacitor, banks of capacitors are used to store electrical energy and condition the flow of that energy. Increasing the number of capacitors in a bank will increase the capacity of energy that can be stored on a single device. In this report, it can be divided into two types LV & MV capacitor banks (less than 35 KV) and HV capacitor banks (above 35 KV).

According to our (Global Info Research) latest study, the global Capacitor Banks market size was valued at US\$ 3343 million in 2023 and is forecast to a readjusted size of USD 4219 million by 2030 with a CAGR of 3.4% during review period.

According to regions, North America dominated the entire market of the capacitor banks with about 31% of the global market share in 2019. Following North America, Europe made up about 28% of the market share.

Between the two types of capacitor banks, the LV & MV capacitor banks held more market share with around 57% in 2019.
