In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Capacitor discharge type magnetizers are devices that use stored energy in capacitors to generate a powerful pulse current for magnetization. The operating principle involves charging capacitors and then rapidly discharging the stored energy through a coil to produce a high-intensity magnetic field, which magnetizes permanent magnetic materials. These magnetizers are widely used in the manufacturing of motors, speakers, sensors, and magnetic components. They offer advantages such as high magnetic field strength, excellent magnetization consistency, and high efficiency, making them especially suitable for magnetizing high-performance materials like neodymium-iron-boron (NdFeB).
