According to our (Global Info Research) latest study, the global Capecitabine market size was valued at US\$ 1048 million in 2024 and is forecast to a readjusted size of USD 1020 million by 2031 with a CAGR of -0.4% during review period.

Capecitabine is an orally-administered chemotherapeutic agent used in the treatment of metastatic breast and colorectal cancers. Capecitabine is a prodrug, which is enzymatically converted to fluorouracil (antimetabolite) in the tumor, where it inhibits DNA synthesis and slows growth of tumor tissue.

Common side effects include abdominal pain, vomiting, diarrhea, weakness, and rashes. Other severe side effects include blood clotting problems, allergic reactions, heart problems, and low blood cell counts. It is not recommended in people with kidney problems. Use during pregnancy may result in harm to the baby. Capecitabine, inside the body, is converted to 5-fluorouracil (5-FU) through which it acts. It belongs to the class of medications known as fluoropyrimidines, which also includes 5-fluorouracil and tegafur.

Roche, Teva and Mylan are the top 3 of Capecitabine, with about 87% market shares.
