## Abstracts

According to our (Global Info Research) latest study, the global Capillary Flow Cell market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Capillary flow cell is a mass transfer device often used in laboratories. It consists of capillary and pool, and is usually used to study the flow and transmission of liquid or gas in capillary. The working principle of the capillary flow cell is to use the capillary phenomenon of the capillary and the surface tension of the fluid to generate a certain hydrostatic pressure and internal flow inside the capillary, so as to realize the transportation and separation of samples. Capillary flow cells are commonly used for the separation and detection of samples such as biomolecules, organic compounds, pharmaceuticals, etc.
