## Abstracts

The global Capillary Flow Cell market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Capillary flow cell is a mass transfer device often used in laboratories. It consists of capillary and pool, and is usually used to study the flow and transmission of liquid or gas in capillary. The working principle of the capillary flow cell is to use the capillary phenomenon of the capillary and the surface tension of the fluid to generate a certain hydrostatic pressure and internal flow inside the capillary, so as to realize the transportation and separation of samples. Capillary flow cells are commonly used for the separation and detection of samples such as biomolecules, organic compounds, pharmaceuticals, etc.
