Scope of the Report:

This report studies the Capital ICT Spending market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Capital ICT Spending market by product type and applications/end industries.

Over the years, enterprises worldwide have become increasingly dependent on technology and the Internet for their day-to-day operations. This trend is expected to intensify, leading to the role of IT departments becoming vital and contributing directly to the organization's agenda. The capital market ICT spending crunch is slowly ending after the cataclysmic financial recession of 2008. It is predicted that ICT spending in financial markets will grow because they are moving from a silo-based trading platform toward a centralized banking system, which would improve and integrate the system. The lending and transactional divisions of capital markets, consisting of retail and institutional investment entities, are investing in financial systems to improve liquidity management to raise IT spending.

China accounted for 28% of worldwide IoT spending in 2017, and 29% of total robotics investments, compared to just 12% of traditional ICT spending categories (hardware, software, services and telecom). Japan and some other Asia/Pacific countries are also

early adopters of robotics and IoT. 3D printing has seen strong early adoption in China and Germany. Cognitive AI investments are dominated by U.S. businesses, who are also leading the way in AR/VR prototypes. Emerging markets, such as India and Brazil, are major contributors to overall mobility spending, but are still playing catch up when it comes to cloud.
