Abstracts

According to our (Global Info Research) latest study, the global Capivasertib market size was valued at US\$ 749 million in 2025 and is forecast to a readjusted size of US\$ 2761 million by 2032 with a CAGR of 14.4% during review period.

Capivasertib is an oral, highly selective ATP-competitive AKT kinase inhibitor that potently inhibits the activities of AKT1/2/3 isoforms, blocks the abnormal activation of the PI3K/AKT signaling pathway, and thereby inhibits the proliferation, survival, invasion and metastasis of tumor cells. The drug is mainly developed for patients with solid tumors harboring PIK3CA/AKT1/PTEN mutations. Clinically, it is mostly used in combination with endocrine therapy for HR-positive, HER2-negative advanced breast cancer, and is also under investigation in various tumor types such as prostate cancer and colorectal cancer, providing precise targeted therapeutic options for advanced cancer patients with abnormalities in specific signaling pathways. In 2025, global Capivasertib production reached approximately 1.8 million bottles.

Capivasertib has established a core position in the treatment of HR-positive, HER2-negative advanced breast cancer by virtue of its first-mover advantage as the world's first-in-class AKT inhibitor and a clear biomarker selection strategy. By continuously expanding its pipeline to cover multiple tumor types such as prostate cancer, it has built a broad market space. Its mechanism of action, which precisely targets the PI3K/AKT pathway, aligns perfectly with the mainstream trend of precision and individualized cancer therapy, effectively filling the clinical gap for patients with endocrine resistance. The current market landscape is oligopolistic. As the only approved AKT inhibitor on the market, Capivasertib faces limited direct competition, with only a few similar drugs in late clinical stages. With gradual market access in major global regions, the popularization of companion diagnostics, and the continuous

expansion of indications, the drug is rapidly penetrating from second-line breast cancer treatment to more tumor types. It boasts significant long-term commercialization potential and is expected to become a key product driving the growth of AstraZeneca's oncology business.
