## Abstracts

According to our (Global Info Research) latest study, the global Capnography market size was valued at USD 911.8 million in 2023 and is forecast to a readjusted size of USD 2629.5 million by 2030 with a CAGR of 16.3% during review period.

Capnography is the monitoring of partial pressure or concentration of carbon dioxide (CO<sub>2</sub>) in respiratory gases, and is an integral part of anesthesia and respiratory critical care. Capnography provides information about the CO<sub>2</sub> production, alveolar ventilation, and elimination of CO<sub>2</sub> from anesthesia circuits and also shows respiratory patterns on a monitor. This is a quick and reliable method to detect acute or life-threatening conditions such as ventilator failure, malposition of tracheal tubes, defective breathing circuits, and circulatory failure in both intubated and non-intubated individuals.

Growth in the prevalence of respiratory diseases, increasing surgeries, and a rise in geriatric population drive the growth of the capnography market. Furthermore, extended utility of capnography in emergency rooms, endoscopic suites, onsite emergency, trauma fields, and X-ray rooms have fuelled the growth of the market. A rise in disposable income and increase in investments in healthcare by governments & private organizations are anticipated to propel the market growth.

The Global Info Research report includes an overview of the development of the Capnography industry chain, the market status of Procedural Sedation (Main-Stream Capnographs, Side-Stream Capnographs), Pain Management (Main-Stream Capnographs, Side-Stream Capnographs), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Capnography.

Regionally, the report analyzes the Capnography markets in key regions. North America and Europe are experiencing steady growth, driven by government initiatives and increasing consumer awareness.
