Abstracts

According to our (Global Info Research) latest study, the global Capryloyl Glycine in Personal Care market size was valued at US\$ 55.56 million in 2025 and is forecast to a readjusted size of US\$ 69.88 million by 2032 with a CAGR of 3.5% during review period.

Capryloyl glycine is a lipoamino-acid personal care ingredient formed by combining glycine with a capryloyl chain. Its hydrophilic amino-acid moiety and lipophilic carbon chain enable it to support sebum regulation, maintain the acidic environment of the skin and scalp, improve blemish- and dandruff-prone conditions, control odor-related microorganisms, and enhance conventional preservation systems. Commercial products are generally supplied as white to off-white powders or solubilized aqueous solutions. The global market for capryloyl glycine in personal care was estimated at approximately 1,500 tons on a 100% active-equivalent basis in 2025, with an average ex-factory price of about 36 US\$/kg.

Demand is supported by the expansion of products for oily and blemish-prone skin and scalp-microbiome care, encouraging formulators to adopt multifunctional ingredients that combine sebum control, scalp purification, deodorization, and preservative boosting. Brand preference for mild, preservative-reduced formulations and amino-acid derivatives is also increasing usage in serums, cleansers, shampoos, and deodorants. Water-soluble standardized systems reduce the dissolution and formulation challenges associated with powder grades, facilitating penetration into mid-market and mass-market personal care; however, relatively high unit prices, formulation-pH constraints, and the continued need for finished-product challenge testing prevent complete replacement of conventional preservatives.
