## Abstracts

According to our (Global Info Research) latest study, the global Capsule Endoscope and Workstations market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

This report mainly focuses on capsule endoscope and workstations market. The capsule endoscope is a non-invasive method for visualizing the entire gastrointestinal tract with a wireless, disposable device called a video capsule, which comes equipped with a camera, battery, transmitter, and light source. Video capsules capture images of the stomach, esophagus, and small intestine, which are used for diagnosis of gastrointestinal diseases. A capsule endoscopy system includes a work station, a data recorder, sensors, and software, which are integrated with wireless capsules.

Geographically, the global capsule endoscope and workstations market is segmented into five major regions which include North America, Latin America, Europe, APAC, and the Middle East and Africa. Among these regions, North America is expected to hold a major share in the global capsule endoscope and workstations market, followed by Europe. The increase in healthcare spending along with the establishment of endoscopic training centers and the rising awareness of minimally invasive surgeries in developing countries is expected to expand the market growth in the Asian region. Owing to the low adoption of such advanced products in Latin America and the Middle East and Africa, are likely to show moderate market growth.
