Capsule endoscopy is a painless technique to evaluate gastrointestinal disorders such as obscure gastrointestinal bleeding, inflammatory bowel disease, ulcerative colitis, celiac disease, polyposis syndrome, small bowel tumor, and colon cancer. Capsule endoscopy is an eight-hour-long procedure, in which the patient swallows a small pill that has three components: a camera, a transmitter, a battery. This device captures images of the gastrointestinal tract and transfer them to a recording device, which can be downloaded on screen. The physician gives results after examining the images.

Global capsule endoscopes market is growing with a significant rate due to demand for faster and accurate diagnostic tools, for managing the rising prevalence of gastrointestinal diseases, colorectal cancer, and government initiatives. Moreover, increasing aging population and introduction of technologically advanced capsules such as Wi-Fi enabled capsule and longer battery life capsule are expected to support the capsule endoscopes market to grow in the coming years. Aging increases the risk of gastrointestinal disorders, such as inflammatory bowel disease, CRC, and appendicitis.
