## Abstracts

Capsule endoscopy is a painless technique to evaluate gastrointestinal disorders such as obscure gastrointestinal bleeding, inflammatory bowel disease, ulcerative colitis, celiac disease, polyposis syndrome, small bowel tumor, and colon cancer. Capsule endoscopy is an eight-hour-long procedure, in which the patient swallows a small pill that has three components: a camera, a transmitter, a battery. This device captures images of the gastrointestinal tract and transfer them to a recording device, which can be downloaded on screen. The physician gives results after examining the images.
