According to our (Global Info Research) latest study, the global Captan market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Captan is a white or pale yellowish brown-colored compound. It is a fungicide which belongs to the class of Phthalimides. In its pure form captan is a colorless crystal having a pungent smell. It is generally used as a pesticide as well as mixed with other components to form a pesticide mixture, which has better effectiveness.

Captan is considered as one of the widely used fungicide and its use in terms of volume has increased drastically owing to its ability to be used in a broad spectrum of applications. Increasing number of agricultural activities has fuelled the demand for fungicides in the Asia-Pacific region. Crops become disease-prone when they are subjected to drastic climatic changes. Over the recent years, North America has witnessed these climatic changes which in turn have fuelled the demand for fungicides for crop protection applications.
