Abstracts

Captive power generation is the power generation unit that has been set up by an industry or individual for its personal consumption. This might comprise a power generation unit or plant set up by a cooperative society or an association of people for the generation of power mainly for the use of its members.

Scope of the Report:

This report focuses on the Captive Power Generation in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The prime forces of the global captive power generation market are burgeoning demand for power coupled with the prevalence of cross-subsidy charge in the cost of generation of per unit of power. Mounting demand across the globe along with growing urbanization and industrialization and an incessantly rising world population is expected to boost the adoption of captive power generation. In the near future, the global captive power generation market is expected to grow at a steady and moderate rate. It has been anticipated that the market will be mainly driven by the growing demand for power and the sky rocketing costs of electricity. The demand for captive power generation is expected to intensify over the next couple of years due to the existence of the element of cross subsidy in power tariff and rise in per unit cost of power generation. Asia Pacific is expected to remain one of the largest markets for captive power generation in light of robust manufacturing base of aluminum, steel and copper in China and India. Expansion of petrochemical refining capacity in Middle East on account of regulatory inclination to augment manufacturing sector output to cater growing domestic demand in automotive and construction applications is expected to fuel captive power

generation market in the near future. The government of Mexico announced National Infrastructure Plan (NIP) from 2014 to 2018, intended for improving construction industry growth in energy, construction and transportation sectors. The worldwide market for Captive Power Generation is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
