Abstracts

According to our (Global Info Research) latest study, the global Captive Power Plant market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Captive power plant is the power generation unit that has been set up by an industry or individual for its personal consumption. This might comprise a power generation unit or plant set up by a cooperative society or an association of people for the generation of power mainly for the use of its members.

In Asia-Pacific, one of the key problems, faced by the industries in many developing as well as under-developed countries, is power availability. There is a need not just for more power generation sources, but also for a stronger grid. The major industrial giants, like India and China, are good examples of the countries with an unreliable power supply. Many countries in this region are characterized by frequent power outages (blackouts and brownouts), which can hinder the economic development. Since the Industrial sector in this region is growing rapidly, relying on the grid power has become difficult for it. These two factors are the biggest reasons behind the region's fastest captive power market growth.
