Abstracts

The global Car Atmosphere Light Control Chip market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The ambient light control chip is an integrated circuit used to control the color, brightness and dynamic effect of RGB LEDs. Constant current drive can ensure that the brightness of LEDs will not be affected by fluctuations in power supply voltage. It is suitable for occasions that require high color and brightness, such as indoor ambient lights. The switch drive controls the brightness by adjusting the duty cycle of the LED through PWM, which is suitable for occasions with low requirements on color and brightness, such as the indicator light outside the car.
