Abstracts

The global Car Atmosphere Light Controller market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The car ambient light controller is an electronic device that can control the color and brightness of the car's ambient light. It is usually based on an RGB LED controller, which can achieve rich scene effects, such as adjusting color and brightness according to temperature and rhythm. The application scenarios of the car ambient light controller are mainly in the car, such as the instrument panel, central control, air-conditioning outlet, door panel, ceiling and other parts. Of course, the exterior part of the car is also used, but due to legal restrictions, the ambient light outside the car body is currently only used on the welcome pedal, welcome projection light carpet, and luminous car logo.

In terms of the upstream and downstream of the industrial chain, the upstream of the automotive ambient light controller includes components such as chips, sensors, passive devices, and circuit boards. Midstream is the design and manufacture of intelligent controllers. Downstream is the automotive electronic terminal products.

At present, automotive atmosphere lights are in the market introduction and growth stage, and are equipped on all levels of models. With the gradual penetration of the new energy vehicle market, it is expected to gain more market share. On the other hand, due to the deep integration of lighting and electronic components, multi-color ambient lights can form a variety of dynamic effects, which can better improve the driving experience. At present, it has also become the mainstream design trend of automotive interior ambient lights.
