According to our (Global Info Research) latest study, the global Car Clutch Pilot Bearing market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The guide bearing is located between the engine and the clutch, allowing a speed difference between the transmission shaft and the crankshaft. Because the shift time of the automatic racing gearbox is very short, the guide bearing may experience very large speed gradient. The guide bearing/bushing supports and centers the transmission input shaft and clutch plate. When the clutch is disengaged, the guide bearing/bushing allows the flywheel to maintain engine speed when the input shaft decelerates and stops.
