Abstracts

The global Car Clutch Pilot Bearing market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The guide bearing is located between the engine and the clutch, allowing a speed difference between the transmission shaft and the crankshaft. Because the shift time of the automatic racing gearbox is very short, the guide bearing may experience very large speed gradient. The guide bearing/bushing supports and centers the transmission input shaft and clutch plate. When the clutch is disengaged, the guide bearing/bushing allows the flywheel to maintain engine speed when the input shaft decelerates and stops.

This report studies the global Car Clutch Pilot Bearing production, demand, key manufacturers, and key regions.
