## Abstracts

The global Car Exterior Ceramic Coating market size is expected to reach \$ 5720.3 million by 2029, rising at a market growth of 5.2% CAGR during the forecast period (2023-2029).

The trend of car ceramic coating is developing rapidly. Ceramic coatings are a type of protective coating that is applied to the exterior of a car to provide long-lasting protection against various elements such as UV rays, dirt, water, and chemicals. One of the main reasons for the growing popularity of ceramic coatings is their durability. Unlike traditional wax or sealants, ceramic coatings can last for several years, providing a high level of protection for the car's paintwork. This durability is especially appealing to car enthusiasts who want to keep their vehicles looking pristine for as long as possible. Another factor contributing to the trend is the ease of maintenance. Ceramic coatings create a hydrophobic surface, meaning that water and dirt slide off easily, reducing the need for frequent washing. This convenience is particularly attractive to busy car owners who want to spend less time cleaning their vehicles. Furthermore, the aesthetic appeal of ceramic coatings is also driving the trend. These coatings create a deep, glossy finish that enhances the car's appearance, making it look more luxurious and well-maintained. This visual enhancement is highly sought after by car owners who take pride in the appearance of their vehicles.
