Abstracts

The global Car Installation Kit Charger market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The car charger is an accessory for convenient charging of digital products with car power at any time and anywhere. It is usually used for car battery (car 12V, truck 24V) power supply. It is widely used in the lithium battery charging field of various portable and handheld devices, such as mobile phones, PDAs, GPS, etc; For vehicle charging, both the actual demand of lithium battery charging (constant voltage CV, constant current CC, overvoltage protection OVP) and the harsh environment of on-board battery (transient peak voltage, system switch noise interference, EMI, etc.) should be considered; Therefore, the power management IC selected for the vehicle charging scheme must simultaneously meet the following requirements: switching power supply chip with high voltage resistance, high efficiency, high reliability and low frequency (which is conducive to EMI design).
