The global Car Leather Interior Modification market size is expected to reach \$ 3801.5 million by 2029, rising at a market growth of 5.3% CAGR during the forecast period (2023-2029).

According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, reaching 97.3 million vehicles and 95.89 million vehicles respectively. In 2018, the global economic expansion period ended, and the global automobile market as a whole declined. By 2022, there will be 81.6 million cars worldwide. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia accounts for 56% of the world's automobile production, Europe accounts for 20%, and North America accounts for 16%. The world's major automobile producing countries include China, the United States, Japan, South Korea, Germany, India and Mexico. Among them, China is the world's largest automobile producer, accounting for about 32%.

The most important part of car interior transformation is the seat. Under normal circumstances, the car leather seat fabric is made of leather and leather, leather, yellow leather and water composite leather three, with better yellow cowhide. Generally, it can be divided into several layers of leather. The outer skin is better, and the first layer in front of the texture has tensile strength and air permeability; the second is two layers of leather, which has poor elasticity and is easy to peel off paint. Use scalp. At present, the popular pinhole leather on the market is generally safe and flexible, with good air permeability, convenient maintenance and longer service life.
