Abstracts

According to our (Global Info Research) latest study, the global Car NFC Door Handle Sensor market size was valued at US\$ 146 million in 2024 and is forecast to a readjusted size of USD 206 million by 2031 with a CAGR of 5.1% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The automotive NFC door handle sensor uses the short-range wireless communication characteristics of NFC technology. When an NFC-enabled device (such as a smartphone) is brought close to the door handle, the NFC chip between the two will establish a communication connection. This connection enables the door handle to read the information in the device and perform identity authentication. Once the authentication is successful, the door will automatically unlock; similarly, the locking operation can also be achieved in a similar way.
