Abstracts

A car rack consists of set of bars mounted on the roof of a car. It acts as an anchor that supports and securely holds a large variety of items, increasing the luggage carrying capacity of a car. These racks are also specialized to mount bikes, water sports equipment, skis, and boats. While some vehicles come with standard factory-installed car racks, others can be purchased and fit with aftermarket parts. They can be fit either temporarily or permanently. They can also be personalized to suit a variety of needs and are characterized based on the load bearing capacity and the types of roofs they are designed to fit. Car racks are used to optimize luggage space, provide comfort and convenience.

Scope of the Report:

This report focuses on the Car Racks in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. One of the major drivers for this market is increasing demand for smaller cars. Several car manufacturers have introduced compact cars that come with a limited boot capacity. The hike in fuel prices has led to the downsizing of vehicles, and therefore, people prefer smaller cars over premium big cars as they are light, compact, and run with lower costs. Further, the report states that one of the major factors hindering the growth of this market is difficulties in installation. The car racks can be installed or removed based on the need and preference of the consumer. However, the task of removing and fitting the racks is tedious. While some car racks are easier to fix and remove, others often involve technical steps. The process of attaching and removing these racks sometimes also damage the frame or paint job of the car concerned.

North America as the leading revenue contributor dominates the global car rack market. Though the shift in weather conditions is expected to reduce the number of individuals participating in outdoor activities, initiatives to increase participation in recreational activities will offer vendors a supporting platform for increasing product awareness and sales, in turn, boosting the demand for car roof storage such as racks in this region.

The worldwide market for Car Racks is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
