According to our (Global Info Research) latest study, the global Car Sharing App market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Car sharing App allows people to rent cars for a short period of time, and the billing method is usually calculated by the hour or day. The main target customers are people who need to use cars occasionally. They will use different types of vehicles for a short period of time and do not want to own private cars for a long time. Part of the reason is that they live in apartments and do not have fixed, exclusive parking spaces; another part is some office workers who only need cars when commuting. Through this service, cars can be used more efficiently and conveniently. With the car sharing apps, users can enjoy the convenience of driving without the long-term financial commitment, tapping into a fleet of vehicles that cater to a variety of needs, whether it's a quick grocery run or a weekend getaway. The apps' user-friendly interfaces and seamless booking processes underscore their appeal, making car access as simple as a few taps on a smartphone. Moreover, the integration of advanced technologies like real-time car tracking and automated billing further enhances the user experience, solidifying these apps' status as a smart choice for modern transportation.
