Abstracts

According to our (Global Info Research) latest study, the global Car-sharing Service market size was valued at US$ 3621 million in 2025 and is forecast to a readjusted size of US$ 5715 million by 2032 with a CAGR of 7.1% during review period.

Car-sharing Service is a mobility service that allows users to rent vehicles for short periods, often by the hour or minute, providing an alternative to personal car ownership. These services leverage digital platforms or mobile apps for vehicle booking, unlocking, and payment, enabling flexible and convenient access to vehicles in urban environments.

The car-sharing industry is currently transitioning from early-stage time-based rental services toward becoming a core component of urban mobility infrastructure. Driven by carbon neutrality policies and green transportation initiatives, electrification has become a central trend. Increasingly, shared fleets are shifting from internal combustion engine vehicles to electric vehicles, integrated with charging networks and energy management systems, improving both operational efficiency and sustainability.

Secondly, the industry is rapidly evolving toward platformization and data-driven operations. AI-based dispatching systems, dynamic pricing models, and real-time demand forecasting are being widely adopted to optimize vehicle distribution and utilization rates, improving overall profitability. At the same time, car-sharing services are becoming deeply integrated with public transportation systems, forming multimodal urban mobility networks that combine metro systems, shared cars, and last-mile connectivity solutions.

Thirdly, autonomous driving is expected to become a long-term transformative driver.

With the maturation of L4 and L5 technologies, future fleets may achieve driverless operations, including autonomous dispatching, charging, and maintenance, significantly reducing labor costs and maximizing fleet utilization. In addition, business models are expanding from simple time-based rentals to Mobility-as-a-Service (MaaS), subscription-based mobility, and corporate fleet management, positioning car-sharing as a fundamental component of smart urban transportation systems.

This report is a detailed and comprehensive analysis for global Car-sharing Service market. Both quantitative and qualitative analyses are presented by company, by region & country, by Type and by Application. As the market is constantly changing, this report explores the competition, supply and demand trends, as well as key factors that contribute to its changing demands across many markets. Company profiles and product examples of selected competitors, along with market share estimates of some of the selected leaders for the year 2025, are provided.

Key Features:

Global Car-sharing Service market size and forecasts, in consumption value ($ Million), 2021-2032

Global Car-sharing Service market size and forecasts by region and country, in consumption value ($ Million), 2021-2032

Global Car-sharing Service market size and forecasts, by Type and by Application, in consumption value ($ Million), 2021-2032

Global Car-sharing Service market shares of main players, in revenue ($ Million), 2021-2026

The Primary Objectives in This Report Are:

To determine the size of the total market opportunity of global and key countries

To assess the growth potential for Car-sharing Service

To forecast future growth in each product and end-use market

To assess competitive factors affecting the marketplace
