An Car Spotlight is a type of lighting system that is installed on a vehicle to provide enhanced visibility in dark or low-light conditions. Unlike traditional static spotlights, which are fixed in one position, dynamic spotlights are designed to move and adjust their direction based on the driver's input or other sensor inputs.

Some advanced dynamic spotlight systems utilize sensors and cameras to automatically detect and track objects of interest. For example, if the spotlight detects a pedestrian on the side of the road, it can automatically adjust its direction to illuminate the pedestrian and alert the driver to their presence. The benefits of automotive dynamic spotlights include improved visibility, increased safety, and enhanced driving experience, especially in challenging driving conditions like fog, rain, or darkness. By providing a focused and adjustable light source, dynamic spotlights can help drivers to see obstacles or hazards more clearly and react accordingly.
