According to our (Global Info Research) latest study, the global Car Stickers market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

Car stickers, also known as decals, are adhesive graphics or designs applied to the surface of vehicles, primarily for decoration, personalization, advertising, or informational purposes. They are made from various materials, with vinyl being the most common due to its durability and weather-resistant properties.

With the decline in the price of car stickers and the improvement of the requirements for the use of the car body, many car stickers have changed their uses, such as being used to stick KT plates for display. There are more and more machines in China that use weak solvent inks, and car stickers have occupied an increasing share in the market as an indoor and outdoor advertising material.
