According to our (Global Info Research) latest study, the global CAR-T Cell Service market size was valued at US\$ 1415 million in 2024 and is forecast to a readjusted size of USD 2021 million by 2031 with a CAGR of 5.3% during review period.

CAR-T (Chimeric Antigen Receptor T-cell) therapy is an innovative and personalized form of immunotherapy designed to treat certain types of cancers, particularly blood cancers like leukemia and lymphoma. The development of CAR-T cells involves a complex process that requires several specialized services. A comprehensive CAR-T cell development service covers the entire pipeline from initial consultation and CAR design through to clinical trials and post-approval support. It is tailored to meet the unique needs of each patient's cancer type, the desired target antigen, and the specific requirements of regulatory agencies.

The CAR - T cell service industry is currently experiencing rapid development and faces many opportunities and challenges. Driven by the increasing incidence of cancer and the continuous advancement of technology, the industry has broad development prospects. Technologically, the research and development of new CAR - T cell technologies is accelerating. The industry is committed to improving the efficacy and safety of CAR - T cells in treating solid tumors, such as by adding controllable suicide genes and pro - inflammatory cytokines to the CAR structure. In addition, the exploration of CAR - T cell therapy in the treatment of autoimmune diseases has also become a hot topic, with many clinical trials ongoing. Commercially, there are currently 11 CAR - T cell therapy drugs approved globally, with sales continuing to increase. However, the high price of drugs and the narrow patient population limit the expansion of the market scale. Therefore, reducing costs and expanding the patient population are the main development directions of enterprises. In the future, with the continuous

progress of technology and the expansion of application scenarios, the CAR - T cell service industry is expected to achieve greater development and bring more hope to patients with cancer and autoimmune diseases.
