According to our (Global Info Research) latest study, the global Car Tail Light Mold market size was valued at US\$ 3206 million in 2025 and is forecast to a readjusted size of US\$ 4826 million by 2032 with a CAGR of 6.0% during review period.

A car tail light mold is a precision injection mold used for manufacturing automotive rear lighting components such as tail lamp housings, lens covers, light guides, and decorative trim parts. These molds are typically designed for high-transparency plastics such as PMMA and PC and require ultra-precision machining, mirror polishing, and thermal control systems to ensure optical clarity and dimensional accuracy. From a value chain perspective, upstream includes mold steel materials, CNC machining tools, polishing equipment, hot runner systems, and mold design software; midstream focuses on mold design, structural simulation, machining, assembly, trial production, and quality validation; downstream demand comes from automotive lighting manufacturers, OEM vehicle platforms, electric vehicle brands, and tier-one lighting suppliers. In 2025, the average selling price of car tail light molds is approximately US\$38,000 per unit, with global sales volume reaching around 82,000 units. The industry maintains a gross margin of 22%–35%, supported by technical barriers, customization complexity, and platform-based repeat orders.
