Car wheels and rims are essential components of a vehicle's wheel assembly, playing a crucial role in both function and aesthetics. Wheels refer to the complete unit that includes the rim, tire, and sometimes the hub assembly. The wheel is responsible for supporting the vehicle's weight and providing a surface for the tire to grip the road. Rims are the outer part of the wheel where the tire is mounted. They come in various materials, including steel and aluminum alloy, and are available in different sizes and designs. The rim's design affects both the vehicle's handling and its overall appearance. Together, wheels and rims contribute to the vehicle's performance, safety, and style. Customizing wheels and rims allows drivers to enhance the look of their vehicle, improve handling, and accommodate specific driving conditions or personal preferences.
