Abstracts

An everloy-cemented-carbide ball end mill is a cutting tool with a spherical cutting edge made of cemented carbide. Cemented carbide is an extremely hard alloy. It is manufactured by adding tungsten carbide or titanium carbide to iron and pressing them together by powder sintering at high temperatures.

Ball end mills have cutting edges on the side and one end face, and the end face side is ball-shaped. Complex curved surface machining is possible. Carbide end mills are mainly used for machining center tools.
