## Abstracts

The global Carbide Burs market size is expected to reach \$ 914.3 million by 2029, rising at a market growth of 13.1% CAGR during the forecast period (2023-2029).

Global 5 largest manufacturers of Carbide Burs are Dentsply, Kerr Dental, Hu Friedy, Komet Dental and SS White, which make up over 25%. Among them, Dentsply is the leader with about 11% market share.

Americas is the largest market, with a share about 33%, followed by Europe and Asia-Pacific, with the share about 31% and 24%. In terms of product type, Friction Grip (FG) occupy the largest share of the total market, about 67%. And in terms of product Application, the largest application is High-Speed Air Driven Hand Pieces, followed by Slow Straight Hand Pieces.

Carbide burs are made of tungsten carbide, a metal that is extremely hard (about three times stiffer than steel) and can withstand high temperatures. Because of their hardness, carbide burs can maintain a sharp cutting edge and be used many times without becoming dull. However, carbide burs are brittle and have a tendency to fracture under pressure. They are best operated at high speeds with light pressure.

Carbide burs are used most commonly for excavating and preparing cavities, finishing cavity walls, finishing restoration surfaces, drilling old fillings, finishing crown preparations, contouring bone, removing impacted teeth, and separating crowns and bridges. Carbide burs are defined by their shank and by their head. The type of handpiece being used determines which type of shank is needed. The procedure to be performed determines the type of cutting design/head shape that is chosen.

This report studies the global Carbide Burs production, demand, key manufacturers, and key regions.
