Abstracts

The global Carbide Grooving Tool market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The 'Grooving Tool' is used for cutting circular grooves on the inner surface of tubing, and for chamfering hole edges. Two types of rectangular cutters are available, one with a single blade and the other with a double blade. Carbide grooving tools are specially designed for grooving deep parts. The tools support internal coolant (either through the flutes, or through an internal bore), which is especially effective when deep holes are involved.

This report studies the global Carbide Grooving Tool production, demand, key manufacturers, and key regions.
