According to our (Global Info Research) latest study, the global Carbon 14 Breath Test System market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

A Carbon 14 Breath Test System is a device that uses a radioactive isotope of carbon (C-14) to detect the presence of Helicobacter pylori (H. pylori) bacteria in the stomach. H. pylori is a common cause of peptic ulcers and other gastric disorders. The system consists of a capsule containing C-14 labeled urea, a breath sample collector, and a liquid scintillation counter. The patient swallows the capsule and exhales into the collector after a certain time interval. The breath sample is then analyzed by the counter to measure the amount of C-14 carbon dioxide produced by the urease enzyme of H. pylori.
