Carbon Accounting Services are specialized services that help organizations measure, track, and report their carbon emissions and other greenhouse gas (GHG) emissions. These services involve calculating the carbon footprint of a company, which includes all direct and indirect emissions from their operations, supply chain, and products. The goal is to quantify the environmental impact of the organization's activities, enabling them to develop strategies to reduce emissions and meet regulatory requirements or corporate sustainability goals. Carbon accounting is essential for businesses that aim to manage their carbon footprint, participate in carbon markets, or achieve carbon neutrality. The data collected through these services are often used in sustainability reporting, compliance with environmental regulations, and for gaining certifications related to environmental standards. By providing transparency and accountability in emissions management, carbon accounting services play a critical role in the global effort to mitigate climate change.
