Abstracts

The global Carbon Asset Management Platform market size is expected to reach \$ 7914 million by 2032, rising at a market growth of 8.5% CAGR during the forecast period (2026-2032).

A carbon asset management platform is a system that utilizes digital technology tools to achieve the intelligent management of carbon assets. It encompasses various sub-platforms?such as those for carbon asset, carbon emission, carbon account, and carbon footprint management?and aims to help enterprises or governments more effectively manage and optimize their carbon assets in order to address the challenges of global climate change and carbon emission reduction.

The growth of the carbon asset management platform market is primarily driven by factors such as the global push for ?dual carbon? goals, the expansion of mandatory carbon markets, heightened requirements for corporate ESG and climate disclosure, rising demand for supply chain carbon data management, and the trend toward the financialization of carbon assets. As the EU ETS, China?s national carbon market, and various regional carbon trading mechanisms continue to mature, enterprises subject to emissions regulations?such as those in the power, steel, cement, chemical, non-ferrous metal, and aviation sectors?require more sophisticated management of carbon allowances, compliance gaps, carbon price risks, and emissions reduction projects. Simultaneously, compliance requirements regarding disclosure and trade?including CSRD, ISSB, TCFD, CDP, and CBAM?are compelling multinational corporations, manufacturers, and exporters to strengthen their capabilities in Scope 1, 2, and 3 carbon accounting, product carbon footprinting, supply chain carbon collaboration, and audit trail management. Furthermore, the gradual development of tools such as voluntary carbon markets, carbon credits, green certificates, carbon removal, and

internal carbon pricing is transforming carbon assets from mere compliance costs into manageable, tradable, and optimizable corporate assets. By enabling capabilities such as carbon emissions data collection, carbon accounting, allowance and credit management, emissions reduction pathway planning, carbon trading risk control, and automated ESG disclosure, carbon asset management platforms are evolving from simple carbon inventory tools into core digital platforms for low-carbon operations and sustainable strategic management.
