Abstracts

According to our (Global Info Research) latest study, the global Carbon Based Precious Metal Catalysts market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

The carbon-supported precious metal catalyst is a supported catalyst that uses carbon as a carrier and adsorbs noble metal active components on the surface of the carbon carrier. Because carbon has a large surface area, good pore structure, rich surface groups, and has good loading performance and reducibility, carbon-supported precious metal catalysts overcome the shortcomings of traditional precious metal catalysts such as difficulty in separation and easy agglomeration. The carrier makes the catalyst have a higher degree of dispersion, which greatly improves the activity and stability of the catalyst and reduces the amount of precious metals.

China is a large country in the application of carbon-supported precious metal catalysts, but it is also a small country for research and production. The research and production of catalysts are seriously inconsistent with the actual application. China's carbon-carrying precious metal catalyst manufacturers generally start late, but with continued R & D investment and the increase in demand in downstream fine chemicals, petrochemicals, pharmaceuticals, environmental protection industry, fuel cells and other fields, the domestic carbon-carrying precious metal catalyst industry has ushered Rapid growth, product capacity and output have been significantly improved, the company's overall strength continues to increase. In recent years, some enterprises with certain technological advantages in specific application fields have emerged in China, such as Xinchang Gongsheng, Xi'an Kaili, Hangzhou Connor, Shaanxi Ricoh, Shaanxi Kaida, Shanghai Xunkai and other enterprises.
