The global Carbon Capture Amine Solvents market size is expected to reach $ 3239 million by 2032, rising at a market growth of 7.2% CAGR during the forecast period (2026-2032).

Carbon capture amine solvents are chemical absorbents formulated with amine compounds as the primary active component, designed to selectively absorb carbon dioxide (CO?) from flue gas, process gas, natural gas, or industrial emissions. In 2025,global carbon capture amine solvents production reached approximately 6,913K ton, with an average global market price of around USD 2,800 per ton. A factory gross profit of USD 840 per ton with 30% gross margin. A single line full machine capacity production is around 65K ton per line per year. The upstream is dependent on ethylene oxide, amonia and proprietary additives. The downstream demand is concentrated in power generation, oil and gas and industrial. Selexol used to remove CO2 in natural gas processing. Canada market is driven by large scale commercial capture projects. Germany and Netherlands market are driven by EU Emissions Trading Systems.
