Abstracts

Carbon capture and storage (CCS) is the process of capturing waste carbon dioxide (CO₂) from large point sources, such as fossil fuel power plants, transporting it to a storage site, and depositing it where it will not enter the atmosphere, normally an underground geological formation. The aim is to prevent the release of large quantities of CO₂ into the atmosphere (from fossil fuel use in power generation and other industries). It is a potential means of mitigating the contribution of fossil fuel emissions to global warming and ocean acidification. Although CO₂ has been injected into geological formations for several decades for various purposes, including enhanced oil recovery, the long term storage of CO₂ is a relatively new concept. The first commercial example was the Weyburn-Midale Carbon Dioxide Project in 2000. Another example is SaskPower's Boundary Dam. 'CCS' can also be used to describe the scrubbing of CO₂ from ambient air as a climate engineering technique.

Scope of the Report:

This report focuses on the Carbon Capture and Storage in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. EOR method is widely being adopted by oil & gas participants to extract oil and gas from mature fields. CO₂ is considered to be an excellent displacing agent for EOR techniques because a large portion of injected CO₂ remains in place in depleted reservoirs. Therefore, this method could provide a good option for CO₂ sequestration to mitigate global warming. CO₂ injection also presents potential benefits by alternatively injecting gas and water as slugs in the water-alternating-gas (WAG) method to control CO₂ mobility and flood conformance. The cost implemented in CCS technology is quite

challenging, but the revenue from EOR has underpinned CCS investment decisions in China and the Middle East. The increasing demand for CO₂ injection, owing to its aforementioned favorable properties in EOR, accompanied with the need to mitigate global warming, is likely to drive the CCS market.

North America CCS industry dominated the global demand accounting for over 60% of the total market. Stringent regulatory framework for cleaner environment coupled with increasing need of carbon dioxide in enhanced oil recovery processes owing to increasing number of matured oilfields are expected to be the major factors driving the industry penetration.

Asia Pacific is estimated to grow at the highest CAGR of 16.4% from 2016 to 2024. The emerging economies in the region such as China and India along with countries such as Japan, Indonesia and Malaysia are focusing on cleaner environment owing to rapid industrialization in the region, thereby, leading to increased carbon emissions.

The worldwide market for Carbon Capture and Storage is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
