# **Abstracts**

According to our (Global Info Research) latest study, the global Carbon Capture Usage and Storage (CCUS) System market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Carbon Capture Usage and Storage (CCUS), also known as Carbon Capture and Storage (CCS), is a set of technologies and processes aimed at capturing carbon dioxide (CO2) emissions from industrial and energy-related sources, utilizing the captured CO2 for various purposes, and storing it underground in a secure and permanent manner.

The goal of CCUS is to reduce greenhouse gas emissions, particularly CO2, by capturing and storing it before it enters the atmosphere. It is considered a critical technology for achieving deep decarbonization and meeting climate change mitigation targets. CCUS can help industries transition to lower-carbon operations while maintaining reliable energy supplies and supporting economic growth.

CCUS development has gained significant momentum in recent years, driven by strengthened climate targets and subsequently increased policy support for the technology around the world. In 2022, 61 new CCUS facilities? were added to the project pipeline globally, bringing the global total of CCUS projects to 30 in operation, 11 under construction and 153 in development. The US already has more CCUS projects than any other country?, and its landmark Inflation Reduction Act of 2022 is expected to drive? further deployment of the technology in the coming years.

In Europe?, countries including the UK, Netherlands and Norway are looking to develop CCUS in regional industrial clusters, in which multiple emitters can benefit economically from shared transportation and storage infrastructure.
