According to our (Global Info Research) latest study, the global Carbon-coated Copper Foil market size was valued at US\$ 1775 million in 2024 and is forecast to a readjusted size of USD 3964 million by 2031 with a CAGR of 12.3% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Carbon-coated copper foil is a composite material formed by coating a layer of conductive carbon material onto the surface of copper foil. It can replace traditional aluminum foil as an anode substrate with superior performance. It exhibits enhanced physical properties such as better conductivity and lower internal resistance. Additionally, it possesses good mechanical strength and toughness, preventing shorts caused by dendrite growth. It also demonstrates better adhesion strength with electrode material coatings. Therefore, it will provide lithium-ion batteries with greater discharge capacity and longer service life.

In recent years, the market size of carbon-coated copper foil has shown a trend of rapid growth. The rapid development of the new energy vehicle (NEV) market is a significant factor driving the increase in demand for carbon-coated copper foil. In NEVs, batteries are the core component, and carbon-coated copper foil is a critical material for the battery's anode current collector. With the continuous increase in NEV sales, the demand for carbon-coated copper foil has also been rising steadily. The rapid development of electronic information industries such as 5G and the Internet of Things (IoT) has also generated substantial demand for carbon-coated copper foil. In these

fields, electronic devices have an urgent need for high-performance, lightweight battery materials, and the excellent properties of carbon-coated copper foil make it an ideal choice.

In the future, as power battery technology continues to iterate and government support for NEVs intensifies, the NEV market will maintain its rapid growth trend, and thus the demand for carbon-coated copper foil will continue to increase. Besides NEVs and the electronic information industry, carbon-coated copper foil also has broad development prospects in emerging application fields such as aerospace and energy storage. Furthermore, with the deepening of research on carbon materials, new carbon materials such as fullerenes and carbon quantum dots are expected to be applied in the production of carbon-coated copper foil, further enhancing its performance.

Upstream and downstream industries: Consumer electronics, Power batteries, New energy vehicles, High-purity copper, Conductive carbon materials.

Specifications: Based on a 9 μm thick copper plate, a single-sided or double-sided coating of 1-3 μm thick conductive carbon layer is applied. Typically, it is packaged in rolls of 2 kg, and the coating width and total width can be customized.
