According to our (Global Info Research) latest study, the global Carbon Composite (CFC) Threaded Rods market size was valued at US\$ 532 million in 2025 and is forecast to a readjusted size of US\$ 730 million by 2032 with a CAGR of 4.7% during review period.

A carbon composite threaded rod is a threaded rod primarily made from carbon fiber or carbon fiber-reinforced composite materials. Carbon fiber is a high-strength, high-modulus fiber with a carbon content exceeding 90%. It is combined with a resin matrix (such as epoxy resin) through specific composite processes (like winding and pultrusion) to form a composite material with excellent mechanical properties. After molding and processing, it is shaped into a rod structure with continuous spiral grooves (threads), resembling traditional metal threaded rods but possessing the unique properties of carbon composites. This type of threaded rod can be used for connecting, fastening, and transmitting force, and it offers advantages in applications where special requirements are placed on weight, strength, corrosion resistance, and other properties.
