According to our (Global Info Research) latest study, the global Carbon Dioxide Capturer market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Carbon Dioxide Capturer, which means extracting carbon dioxide directly from the air, is based on a series of chemical reactions such as adsorption, and then storing it safely and permanently. The only reasonable method of disposal is geological storage, which is being used by many companies to combat the current state of global warming in order to meet the net-zero emission targets of the Paris Agreement. The captured CO₂ can also be used in agriculture, food processing or combined with hydrogen to produce synthetic fuels. Due to the special nature of this product, some of the technologies in the list of companies are, for the time being, innovative and exclusive.
