According to our (Global Info Research) latest study, the global Carbon Dioxide Filter market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

A carbon dioxide (CO<sub>2</sub>) filter is a device used to remove carbon dioxide from air or airflow. Carbon dioxide filters are commonly used in various applications, including air purification, gas purification, and medical applications. Carbon dioxide filters typically consist of filter media designed to absorb carbon dioxide from air or airflow. The filter medium is usually made of activated carbon, which has a high surface area and can effectively adsorb carbon dioxide. In air purification applications, carbon dioxide filters are used to remove carbon dioxide from the air, which can improve indoor air quality and reduce the risk of health issues related to high levels of carbon dioxide. In gas purification applications, carbon dioxide filters are used to remove carbon dioxide from gases such as natural gas or hydrogen, which can improve gas purity and prevent damage to downstream equipment. In medical applications, carbon dioxide filters are used to remove carbon dioxide from the respiratory circuit of mechanical ventilators. This helps to prevent the accumulation of carbon dioxide in the patient's blood, leading to respiratory acidosis and other health issues.
