The global Carbon Dioxide Insufflator market size is expected to reach \$ 1099 million by 2032, rising at a market growth of 6.6% CAGR during the forecast period (2026-2032).

In 2025, global Carbon Dioxide Insufflator production reached approximately 151.11 k units, with an average global market price of around US\$4,500 per unit.

The gross profit margin of major companies in the industry is between 35% – 58%.

In 2025, the global production capacity of carbon dioxide insufflator was approximately 201.48 k units.

Carbon Dioxide Insufflator is a medical device used in laparoscopic and endoscopic surgery to deliver and regulate carbon dioxide gas into the body cavity, creating a stable surgical working space with controlled pressure and flow.

The industrial chain covers upstream pressure sensors, flow valves, filters, tubing, control boards, displays, pumps, and medical gas connectors; midstream device design, assembly, calibration, safety testing, and regulatory compliance; downstream hospitals, surgical centers, laparoscopic departments, endoscopy rooms, and medical device distributors.

The rapid development of minimally invasive surgery and endoscopic diagnosis boosts the application demand of carbon dioxide insufflators. Precise pressure control and stable gas supply maintain a safe surgical cavity environment and ensure operation smoothness. Intelligent pressure protection and gas purification functions further improve medical safety performance.
