Carbon dioxide (CO₂) transportation involves the movement of captured CO₂ from its source—such as industrial plants, power stations, or direct air capture facilities—to storage sites or utilization points. The primary methods of CO₂ transportation include pipelines, ships, rail, and trucks, with pipelines being the most common and cost-effective for large-scale and long-distance transport, especially in carbon capture and storage (CCS) projects. Pipelines transport CO₂ in gaseous, liquid, or supercritical states, depending on pressure and distance requirements, to ensure efficient flow and minimize costs.
