Abstracts

The global Carbon Emission Certification market size is expected to reach \$ 2289 million by 2032, rising at a market growth of 8.8% CAGR during the forecast period (2026-2032).

Carbon emission certification uses products as a chain to attract the entire society to participate in addressing climate change in the production and consumption links. By awarding low-carbon labels to products, we promote a customer-oriented low-carbon product purchasing and consumption model to society. Use public consumption choices to guide and encourage companies to develop low-carbon product technologies and transform into low-carbon production models, ultimately achieving the effect of reducing global greenhouse gases.

The demand for carbon emission certification continues to grow, primarily driven by a combination of factors, including increasingly stringent global climate policies, the advancement of dual-carbon goals in various countries, the gradual implementation of mandatory greenhouse gas reporting regulations, increased demands for transparency in carbon data from suppliers in international supply chains, the rapid expansion of green finance and ESG investment, and companies' proactive efforts to build low-carbon brand images and participate in carbon trading markets. At the same time, increased consumer environmental awareness is also prompting organizations to establish credible credibility in climate action through authoritative certifications.
